## VALVES, GUIDES AND SPRINGS

- Black Diamond™ valves feature one-piece stainless steel construction with stellite tips and special impregnation to improve wear properties and reduce friction; White Diamond® valves feature one-piece construction and hard chrome stems
- Valve guides are made of Ampco-45, a high-performance compound with 80% copper for great heat conductivity and 5% nickel for wear resistance (unless noted in chart)
- Some valve guides are C674 bronze guides, a softer Manganese guide that can be more easily reamed and finished with a high-grade quality ball hone and battery-operated electric drill (see chart)
- Spring sets contain springs and titanium upper collars; keepers and lower collars included as required
- Valves and guides are sold each; spring kits come complete for one motor

## TITANIUM REPLACEMENT VALVES

- Crafted from military-spec certified Ti3Al titanium alloy, these valves are made to endure the harshest racing conditions
- Forged from a single blank, grain flow is improved to enhance the mechanical characteristics of the valve without having to resort to welding
- Special PVD, CVD and CrN coatings are used to provide low-friction surfaces that reduce heat generation and resist carbon build-up; coatings allow alloys like titanium to become ultrasmooth while reaching hardness levels 5x that of high-speed steel

## IRON ALLOY VALVE SEATS

### FOR STEEL VALVES

- Premium valve seats for applications using steel valves
- A specific combination of alloys allowed a creation of high density, iron-based valve seat with uniform hardness, exceptional thermal qualities and high resistance to wear and recession caused by microwelding
- Only by using the latest developments in powdered metal technology were we able to blend these alloys to give a seat material with the qualities required for today's engines
- These seats have been tested on the track and street in high rpm applications with leaded, unleaded and oxygenated fuel, as well as methanol, ethanol, nitrous and forced induction applications
- Sold each

**NOTE: All applications listed use two intake and two exhaust seats unless otherwise noted.**

**NOTE: The seats listed below are only recommendations for specific applications. Always measure your application and have the valve seats installed professionally.**

- All piston skirts are coated with a high-tech molybdenum disulphite coating for faster break-in time and increased piston life
- Cast piston kits are gravity-cast aluminum alloy (not forged) with 18% silicone content, which produces an extremely light but very strong piston
- Forged pistons are forged from 2618 aluminum for superior strength and durability
- Forged High Compression pistons improve power and torque across entire rpm range
- Big Bore pistons increase engine's displacement, torque and peak horsepower
- Forged Replica pistons are forged OE replacements
- Replica pistons and all rings are OEM replacements
- Kits include piston, rings, wrist pin and circlips
- Replacement two-stroke piston rings sold individually; four-stroke piston rings sold as a set as needed

**NOTE: Top end kits include piston kit and a top end gasket kit, top-end bearing and cam chain.**

## FORGED PISTON KITS

- Two-stroke pistons are made from 4032 silicium
- Four-stroke pistons are made from 2618 silicium – the same material used to produce Formula 1 pistons
- Both include 3% copper in materials for better heat resistance
- All pistons are forged using a precision heat-treatment process that allows for production tolerances of just 0,005 mm
- Most piston kits are available in A or B sizing
- Kits include antiwear coated piston, rings, pin and circlips

## HIGH-PERFORMANCE ATV TOP-END GASKET KITS

- Gaskets and gasket sets used by professionals in high-performance machines and as OE replacements worldwide
- Each PART # contains the proper number of gaskets for one application

### TOP AND BOTTOM END GASKET KITS

- Top-end gasket kits include correct base, head gasket and cylinder O-rings as well as other top end-specific O-rings or seals needed for R&R of top end
- Bottom-end gasket kits include correct oil seals, O-rings, drain plug washers, water pump cover gaskets
- Materials will vary depending on what is correct and engineered for specified application
- Some kits available with clutch and magneto cover gaskets made from EST material instead of fiber; see chart

### COMPLETE ENGINE GASKET KITS

- Purchase a top-end and a bottom-end gasket kit for a complete gasket kit when doing a total engine rebuild

### EXHAUST GASKETS

- Made for extreme temperatures
- Gasket material and construction will vary by application to ensure longevity with leak-free performance under all conditions

### CLUTCH AND STATOR COVER GASKETS

- Clutch and stator cover gaskets are made from an AFM Material which is a chemically blown, compounded nitrile synthetic rubber bonded to an aluminum core
- Aluminum core gives the gasket strength for a superior seal and prevents the gasket from weeping or crawling out in today's engine cases with limited sealing surfaces
- No sealants required for installation
- Save service time as AFM will not stick to the engine case, making replacement quick and easy; no more scraping

### VALVE COVER GASKETS

- Valve cover gaskets are made from application-specific materials to ensure longevity and correct fitment for a leak-free seal
- Provide quality, high-tech sealing solutions at a lower cost than the OEMs

## TORQDRIVE® CLUTCH KIT

### FOR YAMAHA YXZ1000R/SE/SS/XTR 16-21

- Innovative clutch disc technology allows Rekluse to put more discs into the clutch pack, which means you get more torque transferred to the rear wheels
- TorqDrive provides a friction disk pack for both R and SS (five additional friction discs over stock); more frictions = more torque capacity, thus unlocking the full power of your engine
- For added tuning and performance, a coil spring pressure plate is included along with two sets of springs to upgrade the clutch from the stock diaphragm spring
- The TorqDrive clutch pack, coupled with the coil spring conversion pressure plate, provides a significant step up in performance delivering improved throttle control and more positive clutch engagement and drive
- Two sets of springs included
- Improved pedal modulation range for R models
- Designed to withstand highly modified motors
- Rekluse sleeves eliminate basket wear and notching

## TORQDRIVE® CLUTCH PACKS

- A high-performance manual clutch is now more accessible than ever with the TorqDrive Clutch Pack
- It's as easy as changing your clutch plates into your OEM components
- Proven at the highest levels of racing, TorqDrive thin friction disc technology allows more discs to fit in your OEM clutch's footprint, decreasing slip and unlocking the full power of your engine
- TorqDrive Technology also provides increased clutch life and decreased clutch fade
- The additional friction discs provide an average of a 25% gain in torque capacity over stock, while reducing lever pull by an average of 10% (figures vary by model)
- TorqDrive delivers stronger drive throughout the powerband, unlocking the bike's power without any expensive motor mods
- Rekluse basket sleeves eliminate basket wear and notching

**NOTE: Not a replacement clutch pack for RadiusX, RadiusCX or Core Manual TorqDrive.**

Clutch Spring Set

# CLUTCH KITS AND CLUTCH SPRINGS

## CK STANDARD SERIES CLUTCH KITS

- Cork-based clutch material impregnated with aluminum particles to increase wear life and heat resistance
- Highly compressed construction avoids swell and clutch drag
- Ideal for general-purpose street/sport/touring bikes
- Kit includes complete engine set of friction plates only

## CKF SERIES CLUTCH KITS

- Kits have carbon-fiber impregnated friction plates

- Available for select applications, see chart

## DRC SERIES CLUTCH KITS

- Anti-swell, alloy-impregnated heavy-duty cork-based facings for smooth clutch take-up
- Allow modulation, unlike paper clutches that tend to snatch
- Complete engine set of friction plates, HD springs and steel separator plates prevent premature driven plate wear, oil muddying and loss of stack height
- Built with swagged aluminum carriers that spread the load on the clutch basket and prevent clutch basket "dogging"

## DRCF SERIES CLUTCH KITS

- Heavy-duty clutch kit designed for hard use and race applications
- Feature carbon-fiber lined clutch friction plates, a full set of steel plates and heavy-duty clutch springs
- Ideal for use in 4-stroke, high-torque engine applications; great upgrade for 2-stroke performance applications

## CLUTCH PLATES AND SPRINGS

- Clutch friction plate kits are supplied as a separate kit from springs and drive plates
- Different friction materials are used to match original specifications
- Friction plates should be allowed to bed in to avoid glazing friction surface
- Drive plate kits are corrosion-free steel
- Drive plate thickness and dimensions correspond to original
- Check old plates for color and wear and preferably replace at the same time as friction plates
- Clutch springs are approximately 10% stronger than original springs
- Clutch springs' increase in strength is achieved either through the extra length or by tighter winding

**NOTE: Some synthetic oils increase the danger of clutch slip with friction plates.**

## TAV2 TORQ-A-VERTER

### FOR ATVS, GO KARTS AND MINI BIKES

- Replaces centrifugal clutch system and boosts performance
- Clutch is asymmetric-type torque converter system with asymmetric sheave faces; this makes it possible to force the belt to a diameter within the drive clutch (at high rpm) that exceeds the usual 1:1 drive ratio
- TAV2 system can actually attain a 0,90:1 ratio (10% overdrive)
- Movable sheave face is 18°, stationary sheave is $2^{1}/_{2}$°, for a collective angle of $20^{1}/_{2}$°
- For use on $^{3}/_{4}$" or 1" crankshaft diameter 2- and 4-cycle engines with a maximum of 8 hp

FLO Oil Filters

## FLO STAINLESS STEEL, REUSABLE "SPIN-ON" OIL FILTERS

- Made from laser-cut, medical-grade, 304 stainless steel micronic filter cloth, this filter provides 200% more filter area in many cases
- Stainless filter catches items down to 35 microns, which is about three times better than most good paper or brass filters
- Unlike glued paper filters, the FLO Oil Filter pleat seam is welded and able to withstand up to 316 °C (600 °F)
- Filter maintains consistent flow under all conditions including extreme heat, the presence of water, and cold start-ups
- High tech filter technology widely used in all types of auto racing including NASCAR, Indy type cars, Formula 1 and the aerospace industry
- The last filter an owner ever needs

## RADIATOR CAPS

- Old and faulty radiator caps can cause steam and fluid to be pumped out of the radiator overflow hose
- A replacement cap is the least expensive and easiest way to solve or troubleshoot your liquid cooled bike/ATV radiator problems
- Upgrading to a high-pressure 1,6 bar, 1,8 bar or 2,1 bar from the stock radiator cap is the simplest and least expensive way to avoid over-boiling your engine
- Raising your cooling system's maximum operating pressure increases your coolant's boiling point, allowing you to ride harder and longer
- Black finished cap
- Universal fit for most Japanese models along with 2016-to-current model fitments for all KTM/ Husqvarna, and from 21-22 all Gas Gas fitments
- High-temperature corrosion-resistant silicone seals

- Races are won or lost in fractions of a second
- Dynojet's Quick Shifter (DQS) kit allows full-throttle, clutchless upshifts in racing and performance riding applications
- The shift rod pressure/tension sensor kit is a universal sensor that mounts to the shift rod in either a push or pull configuration
- Requires modification of gear-linkage tierod
- The linear travel sensor kit works with bikes that have no shift rod, or on those the shift rod sensor will not fit
- Mount one end to the shift lever and the other to a fixed point on the chassis
- Push or pull-types available with universal mounting kit
- Plugs directly into the Power Commander expansion port with no rewiring required
- Power Commander Control Center software lets you set engine dead time during upshifts and minimum rpm for system operation
- PART #1601-0328 is a "linear" sensor for PCIII USB
- PART #s 1601-0329 and 1601-0330 are "linear" sensors for PC V

**NOTE: To order either of the above sensors, you must find the correct direction of movement during an upshift (push or pull). For the shift rod/pressure/tension sensor, press on the shift lever in the direction of an upshift to see if the rod is pushing or pulling on the clevis on the shift shaft. For the linear travel sensor, also move the shifter for an upshift. If movement is down, a pull sensor is needed. If movement is up, a push sensor is required.**

## AIR FILTERS

- Unsurpassed in airflow, stopping dirt and overall performance
- Two-stage air filters come apart for maximum airflow and ultimate cleaning
- Most filters feature the Ultra Seal grease groove on the sealing surface
- Each fits in stock airbox exactly like OEM filter
- Cleans easily with grease-cutting dishwashing detergent; just clean, oil and reuse indefinitely

## STANDARD AND BACKFIRE FILTERS

- Twin Air dual-stage filters are the choice of top factory teams and riders worldwide
- Dual-bonded foam design filters out even the smallest dirt particles, while allowing more airflow than two separate layer filters (flow bench proven)
- Flat foam sealing ring provides a secure seat against the airbox, even in the worst riding conditions
- Twin Air filters are slightly smaller than stock, making them easier to change while increasing dead air space around the filter for better performance
- Backfire filters include a laminated layer of backfire-retardant foam

1011-2337

## FACTORY PRE-OILED AIR FILTERS

- The same factory treatment that race teams and OEMs receive is now available for all Twin Air users
- Filters are pre-oiled with Twin Air Bio-Foam Filter Oil using our state-of-the-art filter oiling machines to provide the ultimate consistency in pore coverage
- Same industry-leading Twin Air Filter you are used to, now pre-oiled for your convenience
- Comes in a new, resealable bag for added convenience
- Available in standard Twin Air replacement filters and PowerFlow Twin Air replacement filters
- PowerFlow replacement filters include Backfire Filter

1014-0035

## POWERFLOW KITS

- Don't let your stock setup rob you of power and engine reliability
- Eliminates leaks and provides more air for power, but the filter can still be removed in a snap for cleaning
- The new generation PowerFlow kit converts the filter mounting system from a clamp-on filter to a filter cage and wing bolt mounting system
- This new flange system allows for the use of a Twin Air Airbox Cover for washing the airbox

## AIRBOX COVERS

- Remove the air filter and pressure wash the inside of the airbox by covering the carb inlet with a watertight cap
- Made of PVC with a rubber sealing ring
- Top screw included

## STOCK REPLACEMENT KITS

- Replacement filters that require other parts like a reducer, cage, spring or something else
- Kits contain all necessary parts needed for each application

1011-2342

## GRAND PRIX FILTER COVERS

- Nylon filter cover helps prevent dust, sand and mud from clogging your filter

## AIR FILTER DUST COVERS

- Coarse foam pre-filter will act as an additional layer of protection and extend service time between filter cleanings

## UNIVERSAL CLAMP-ON AIR FILTERS

- K&N universal air filters come in four styles — round straight, round tapered, oval straight and oval tapered
- All round straight types, oval straight types and oval tapered types have rubber end caps (unless noted differently)
- All round tapered types have chrome end caps (unless noted differently)
- All clamp directly to the carburetor throat, replacing the stock airbox and filter element
- Pleated design increases surface area airflow
- Match the outer diameter (OD) of your carb throat with the inner diameter (ID) of the filter (given in inches and millimeters)

F = Inside Diameter | L = Filter Length | FA = Flange Angle | MA = Filter Oval Length
D = Filter Diameter | FL = Flange Length | SA = Filter Oval Width

## POWER-FLO DIRT VALVES

- Provide maximum fuel for combustion – test results have proven as much as twice the fuel flow over stock petcocks
- Won't restrict fuel flow to the carb
- Eliminate the stumble in long whooped-out sections
- Keep the carburetor full of fuel at all times
- Ensure consistent fuel mixture under all conditions
- Machined from lightweight billet aluminum; not a cast piece like the OEM petcock
- Lighter than the stock petcock
- Use stock mounting holes and hardware

IRIDIUM IX

## IRIDIUM IX SPARK PLUGS

- The ultimate in the evolution of spark plug technology and performance from the industry leader
- The iridium electrode is 25% smaller than a platinum electrode, and it's just 1/4 the size of a conventional nickel electrode
- Ultra-small diameter center electrode reduces voltage requirement and extends ignition system life
- Metal shell plating has enhanced anti-corrosion qualities

## IRIDIUM SPARK PLUGS

### BETTER METALS MEAN BETTER SPARK PLUG DESIGNS

- Six times harder than platinum, iridium doesn't melt in temperatures up to 2204 °C (4000 °F)
- Because the iridium electrodes of these plugs can be shrunk to only 0,4 mm, voltage requirements decrease while firing performance improves
- 360° laser welding of electrode provides a seal that resists wear, even in the worst conditions
- Ground electrode features a tapered cut and U-groove that form a large volume area for the flame's center
- Use NGK reference chart to order and stock these plugs

## E3 SPARK PLUGS

- Unique electrode shape maximizes the power created by the spark plug – Diamond Fire technology
- Electrode is a combination of performance and technology that results in an improved flame kernel shape
- This flame front ignites the bulk air/fuel mixture faster, moves heat into the combustion chamber faster and creates a more localized pressure front for faster pressure rise during the cylinder power stroke
- The result is more complete combustion and improved engine performance
- A truly premium performance plug
- Sold each

OEM Output cap

## STARTERS

- Affordable starters are constructed with longer-life bearings than OEM
- Many OEM starter motors have an unprotected output needle bearing on the outside of the output shaft's seal; moisture can and does enter the output cap of the electric motor and follows the armature shaft to the unprotected output needle bearing, which corrodes the bearing
- Rick's takes the extra step of installing a double-sealed ball bearing, with the output shaft seal on the outside of the bearing in their new aftermarket unit
- This simple application of common-sense engineering does two things: first, the outside bearing is now protected from damaging water entry, and second, the sealed ball bearing is replaceable

## RELAYS

- Direct replacement relays by the original manufacturers, not reproduction units
- Each relay is the exact same voltage and amperage for a worry-free installation
- These relays are used to control functions like the fuel pump, power steering, cooling fan, EFI, etc.
- Most machines use multiple relays and are located in the fuse box

## KILL SWITCH HOW TO ORDER

**NOTICE TO CUSTOMERS: There are two types of stop switches: (1) Normally Open (NO) or (2) Normally Closed (NC).**

**Switches in this catalog are typically of the Normally Open (NO) type. They work by GROUNDING the primary ignition lead when activated.**

**Note that they will not work on electrical systems requiring a Normally Closed (NC) switch, which works by OPENING the circuit when activated. NC switches are typically used on battery type ignitions, which may have an ignition key as an identifier. NC switches are generally found on newer machines. If in doubt, check your machine's wiring schematic.**

### WIRE GAUGE CONVERTER

| GAUGE | MM² | MM Ø | GAUGE | MM² | MM Ø | GAUGE | MM² | MM Ø | GAUGE | MM² | MM Ø |

### WIRE GAUGE SELECTOR

It's important to match up wire diameter and current properly. To choose the right gauge wire, you will need to know how much Wattage (or Amperage) you will draw and what the length of the cable will be.

**NOTE: The chart below is based on a 12V system. To find the appropriate wire for 6V systems, the Amp and Watt numbers should be divided in half.**

| AMP. | WATT | 91 CM (3 FT) | 152 CM (5 FT) | 213 CM (7 FT) | 305 CM (10 FT) | 457 CM (15 FT) |
|---|---|---|---|---|---|---|

| 6A | 36W | 18 AWG | 18 AWG | 18 AWG | 18 AWG | 18 AWG |
| 7A | 42W | 18 AWG | 18 AWG | 18 AWG | 18 AWG | 18 AWG |
| 8A | 48W | 18 AWG | 18 AWG | 18 AWG | 18 AWG | 18 AWG |
