## CONTROL CABLES

- OEM-style cables are available in a wide variety of applications for most popular models
- Cables are nylon lined and use precise OEM component dimensions
- Terminator clutch cables are available for several models; wires in the outer casing are wound lengthwise instead of around the cable to eliminate compression and spongy clutch feel

VENHILL

## FEATHERLIGHT CONTROL CABLES

- Clutch and throttle cables made to Venhill's high-quality Featherlight specifications
- Marine-grade stainless steel inner wire that runs through a PTFE liner
- Reduced friction provides a light action, easing pressure on the hand, especially in stop/start traffic and during long rides
- PTFE lining removes the need for lubrication
- "Bird-cage" process is applied to inner wire, allowing solder to penetrate the weave of the cable and making the bond with the nipple much stronger
- Available in standard Featherlight or braided style
- Throttle cables sold in pairs; clutch cables sold each

## FOLDING BAR END MIRRORS

0640-0487

- Inspired by aircraft structural design combined with unique "cafe racer" styling
- Our mirror heads and mounting arms are completely CNC-machined from billet aluminum, super-lightweight, strong, and fully adjustable in a multitude of directions and settings
- All parts are anodized for durability
- Mirror head swivels (folds) a full 180° frontwards and backwards, a full 360° rotational on the bracket arm, and features a ball bearing detent when it is in the extended position; the bracket arm may be rotated up or down to your desired position on the bar mounting shaft
- All rotational tension of the parts may be set to your preference with an Allen wrench, and all hardware is top-quality heat-treated alloy plated with our "gold cad" finish for strength and durability
- All moving parts feature super-smooth pivoting action due to the use of nylon spacers between the mating parts
- Mirror provides exceptional rear visibility due to the use of our exclusive custom-made convex mirror glass
- Mounting is achieved with the use of expanding internal bar mounts (sold separately)

**NOTE: The use of adjustable shift and brake linkages is recommended for driver applications. Placing the floorboards on mounts intended for footpegs may prohibit them from folding up in the same manner as the stock peg. While the board can be rotated for a more comfortable position, some angles may cause the board to contact other components on the bike that will prevent the board from folding up completely. Before ordering, be aware of components on the bike that may interfere with the placement of floorboards.**

## HIGH-PERFORMANCE HALOGEN BULBS

- Because of their unique filament materials, reflective technology, and proprietary coatings, PIAA bulbs offer far greater output than standard halogen bulbs
- While standard halogen bulbs give off a yellowish light that's not at all similar to sunlight, PIAA's technology gives off a whiter, brighter light or piercing amber light, enhancing visibility
- XTRA technology in Super Plasma and Star White bulbs allows light output to be dramatically higher than normal bulbs drawing the same wattage
- Each bulb is factory tested, ensuring it's within PIAA's extremely high manufacturing tolerances and performance standards

### SUPER PLASMA GT-X

- For the look of HID there is nothing closer than the GT-X Super Plasma bulbs
- With the H4 shining at 3800 to 5000K (Kelvin Color Temperature) and the H3 at 5000K, you will never sacrifice performance; with the XTRA technology, these bulbs have power to spare

### XTREME WHITE

- Bulbs shine at 4150 Kelvin color temperature
- Closest in brightness to PIAA's High Intensity Discharge (HID) lights

## IRIDIUM SPARK PLUGS

### BETTER METALS MEAN BETTER SPARK PLUG DESIGNS

- Six times harder than platinum, iridium doesn't melt in temperatures up to 2204 °C (4000 °F)
- 360° laser welding of electrode provides a seal that resists wear, even in the worst conditions
- Ground electrode features a tapered cut and U-groove that form a large volume area for the flame's center
- Use NGK reference chart to order spark plugs

## CHAMPION SPARK PLUGS

### STANDARD AND RESISTOR TYPES

- Champion Powersport series plugs include all the features of their conventional plugs, but are built with extreme engine conditions and durability in mind
- Copper Plus motorcycle spark plugs have a copper core center electrode that allows for accurate control of heat range, optimizing performance and longevity for the spark plug
- Fine wire electrodes increase ignitability by reducing spark quench
- Increased bore clearances between shell and core nose reduces fouling caused by carbon deposits
- SAC-9 semi-conductor resistor for maximum EMI and RFI suppression

**NOTE: Part numbers beginning with "R" are resistor type.**

## E3 SPARK PLUGS

- Unique electrode shape maximizes the power created by the spark plug – Diamond Fire technology
- Electrode is a combination of performance and technology that results in an improved flame kernel shape
- This flame front ignites the bulk air/fuel mixture faster, moves heat into the combustion chamber faster and creates a more localized pressure front for faster pressure rise during the cylinder power stroke
- The result is a more complete combustion and an improvement in engine performance
- A truly premium performance plug
- Sold each

## SUPER COIL KITS

### FOR UNIVERSAL APPLICATIONS

- High-output coils for use in either 2- or 4-cylinder motorcycles
- Motorcycles with point or electronically triggered ignitions use PART #140403 or #140403S
- Bikes equipped with capacitive discharge ignition (CDI) use PART #140404 or #140404S
- ACCEL engineers designed these coils' special low-resistance primary winding to match the operating characteristics of factory and aftermarket CDI systems
- Maximum performance with fast rise times
- Extra-heavy-duty 8,8 mm silicone wires included

**NOTE: Using the wrong coil may damage your motorcycle's electronic ignition module. To determine your ignition type, complete the following test:**

1. Determine whether the type of coil you are replacing is a high tower coil. (These coils will NOT replace single tower coils.)
2. Using a volt meter or 12V test light, hook the positive lead to the positive post and the negative lead to the ground on one of the stock coils.
3. Turn the ignition on, but DO NOT engage the starter button.
4. If there are 12V at the coil, the motorcycle has an inductive type ignition. If there is no voltage at the coil, then the motorcycle has a CDI ignition because the power goes to the control box first.

[1] Primary resistance 1,7-1,8 ohms, Secondary resistance 9,5-10 ohms.

[2] On bikes with several coils, order the correct number and never mix the original coils with PVL units as this would damage the engine.

[3] On EFI Twins, the original spark plug leads are not compatible with this coil. You need to take the "Twins EFI" Kit which includes the required HT leads from NGK.

[4] Each cylinder has 2 spark plugs, order quantity = 3.

## KILL SWITCH HOW TO ORDER

**NOTICE TO CUSTOMERS: There are two types of stop switches: (1) Normally Open (NO) or (2) Normally Closed (NC).**

**Switches in this catalog are typically of the Normally Open (NO) type. They work by GROUNDING the primary ignition lead when activated.**

**Note that they will not work on electrical systems requiring a Normally Closed (NC) switch, which works by OPENING the circuit when activated. NC switches are typically used on battery type ignitions, which may have an ignition key as an identifier. NC switches are generally found on newer machines. If in doubt, check your machine's wiring schematic.**
