## SUPERMOTO ROTORS AND ADAPTERS

### SUPERMOTO STREET ROTORS

- The ideal solution for the rider who wants race-oriented performance without the cost of switching to a full Supermoto Racing setup
- Designed for use with stock brake calipers, Supermoto Street Discs are 4 mm thick and utilize a 320 mm floating design
- Like the flame design outer ring, the inner carrier is in premium-quality stainless steel, mounted with 10 stainless steel floaters
- Discs must be used with Moto-Master matching CNC-machined black adapter bracket
- For optimal performance it is recommended to use Moto-Master matching brake pads in the racing compound with this brake setup

### SUPERMOTO FRONT RACING ROTORS

- 320 mm floating front flame rotors are specially designed for use with Moto-Master 4-piston CNC-machined racing calipers
- The inner carrier is an aluminum anodized piece, and rotor thickness has been increased over Moto-Master's Standard Supermoto Rotors to 5 mm
- All rotors go through a vigorous testing process, and are able to withstand temperatures up to 540 °C (1004 °F) without any deformation or friction loss (fading)

### ADAPTER BRACKETS FOR SUPERMOTARD STREET AND SUPERMOTARD RACING ROTORS

- Adapter bracket is needed to mount Supermotard Street and Supermotard Racing Discs
- Fully CNC-machined 6082 billet aluminum construction
- Supermotard street adapter brackets are used to relocate the stock brake caliper; Supermotoard racing adapter brackets are for use with Moto-Master Supermotard four-piston front caliper (PART# 1701-0592, sold separately on page 1380)

GALFER PERFORMANCE BRAKING SYSTEMS

## CUBIQ® BRAKE ROTORS

- Named after the crystal steel molecules, the Cubiq® brake rotor combines state-of-the-art technology with modern design
- Rotor shape promotes uniform brake pad wear - the same contact surface between the pad and disc every revolution generates regular wear
- Less unsprung weight (up to 40% lighter than standard round rotors) reduces gyroscopic effect and improves the manueverability of the motorcycle
- Increased perimeter surface design generates more cooling surface around the rotor for better temperature dissipation
- Available in fixed (solid mount) or floating designs
- Sold each

**NOTE: For maximum braking performance and rotor longevity, Galfer recommends using Galfer brake pads with Galfer rotors. See pages 1358-1367 for Galfer brake pads.**

- Design meets all FMVSS-106 standards once assembled per the included instructions, for safe and reliable on-road use (see compatibility note below)
- Kits available in both stainless and black finishes
- Basic Builder Metric Kits contain 10 mm banjos, fittings and a mini manifold to build multiple brake lines
- Master Builder Kits contain banjos and fittings to build multiple front single disc brake lines, hydraulic clutch lines and most rear brake lines — plus additional banjos along with four brazed and plated manifolds to build most dual front disc brake lines
- All kits are organized in a labeled, compartmental carrying case and include 7,6 m (25') of non-yellowing clear or black coated braided stainless steel hose, chrome or black chrome-plated banjos, polished stainless hardware, copper crush washers plus a set of durable Aluminum BYO® Vise Jaws.
- Brake hose and fittings are compliance labeled, pressure tested and 100% inspected
- NOT for use with Anti-lock Brake Systems

**NOTE: BYO® brand brake hose and components have been specifically designed to work ONLY in conjunction with each other. Use with any other Magnum brake line products or other manufacturer's brands will void any warranty, performance, liability and DOT FMVSS-106 compliance claims.**

**NOTE: Black Master Builder Kits do NOT contain rear brake line T-blocks or inverted flare fittings.**

**NOTE: Black Builder Kits Hydraulic Clutch Fittings are a natural stainless steel finish.**

**NOTE: All BYO® brand brake lines are intended for non-ABS applications ONLY.**

## FORK LOWERING KITS

### FOR CRUISER BIKES

- Give Cruiser bike front ends that custom lowered look by lowering the forks
- Your choice of 25,4 mm or 50,8 mm (1" or 2") lowering height is available at time of installation
- To maintain proper balanced geometry, it is recommended lowering the rear of the bike the same amount as the front
- Installing a lowering kit will decrease initial ground clearance; motorcycle will be lower to the ground and care should be taken to avoid bottoming, especially over bumps or in turns

## FORK SEALS AND DUST SEALS

- Seal profile is engineered to create equal pressure in each seal lip; equalized seal pressure creates less drag and longer seal life
- MAX-LIFE has a coefficient of friction up to three times less than the OEM seal material
- Triple-lip seal design
- Directional ribs allow seal to be installed easily
- Kits include fork oil seals and dust seals; fork oil seals and dust seals also available separately

## SHOCKS

- Wet born piston rod with self-adjusting bearing
- Radial piston with straight flow and pre-load through a pre-combustion oil chamber guarantees an optimum response
- Made from 7075-T6 Aircraft Aluminum
- Anti-Block-System; a separate pressure valve prevents a hydraulic lock of the shock
- Anti-Fading Damping System; because of the aluminum piston and the steel tube there is no fading in the damping system when the temperature of the oil increases
- Rebound/compression adjuster; 50/30 clicks (compression adjustment only for fully-adjustable shocks)
- Threaded Spring Preload Adjuster
- The modular system creates the possibility to replace every part
- Shock spring comes in black unless noted in chart
- ABE approved unless noted

## 465 SERIES SHOCKS

- High-pressure gas monotube design for the ultimate performance
- Five-position rebound adjustment to tailor t he suspension for changing conditions and riding styles
- Threaded shock body with a wide range of adjustment to fine-tune preload and sag
- Hard anodized aluminum body and components for excellent durability and corrosion resistance
- 46 mm bore and deflective disc piston provides precise damping
- 16 mm hard chrome shaft rides on custom Viton® seals for low friction and leak-free reliability
- Each shock is custom tuned (damping and spring rate) for each fitment
- Some applications are available with Remote Adjustable Preload (RAP); this option features a remote hydraulic adjuster to make it even easier to fine-tune your suspension for different loads, such as passengers or luggage

**NOTE: Many fitments are available in either Standard or Heavy-Duty. HD applications are recommended for bikes that are operated at or near the manufacturer's maximum load rating over 50% of the time.**

**NOTE: Before purchasing or attempting to install shocks that are different than the OEM length, confirm that your wheel travel can be altered without causing clearance issues such as swingarm/axle to exhaust contact as well as chain/belt guard or tire contact.**

## SHOCK REBOUND SEPARATOR VALVES

- Replace the stock shaft nut with an asymmetric valve to offer different flow rates for compression and rebound
- The stock low speed rebound adjuster flows at the same rate during compression and rebound which makes the lowest speed damping too mushy causing bottoming and an unresponsive feeling during long duration hits; shock rebound separator valves correct this issue
- Pitch control keeps geometry more consistent during acceleration and braking

## RAISING/LOWERING KITS

### LOWERING KITS

- Allow rider greater ground contact
- For most models, use of a lowering kit means that the side stand must be shortened
- Should only be installed by a trained technician

### RAISING KITS

- Better handling through modified suspension geometry
- Allow between 25 mm to 45 mm more ground clearance
- More load on the front wheel and better appearance
- Should only be installed by a trained technician

**NOTE: ABE approved unless noted.**

**NOTE: Some modification of the shock absorber system may be necessary for installation**

### RAISING/LOWERING LINK TYPES

01 = Triangle plates
02 = Seating for strut eye
03 = Tie rod
06 = Tie rod
07 = Seating for strut fork
10 = Spring plate

- One-piece stainless-steel, stellite-tipped valves impregnated by a special nitrided process with 0,05 mm (0,002") depth and 0,005 mm (0,0002") surface buildup to improve wear properties and reduce friction
- This process provides resistance to corrosion; wears superior to hard chromium and electrolysis nickel-plating
- Lightweight with profiles that provide excellent flow characteristics
- Compatible with leaded and unleaded fuels and can be run in cast iron- and bronze-type guides at close tolerances for maximum oil control and heat dissipation
- Sold each

## CLUTCH PLATES AND SPRINGS

- Clutch friction plate kits are supplied as a separate kit from springs and drive plates
- Different friction materials are used to match original specifications
- Friction plates should be allowed to bed in to avoid glazing friction surface
- Drive plate thickness and dimensions correspond to original
- Check old plates for color and wear and preferably replace at the same time as friction plates
- Some clutch springs are approximately 10% stronger than original springs
- Increase in clutch spring strength is achieved either through the extra length or by tighter winding

**NOTE: Some synthetic oils increase the danger of clutch slip with friction plates.**

REKLUSE clutch rEvolution

## CORE EXP 3.0 CLUTCH KIT
### FOR YAMAHA WR250X 08-11

- Core EXP 3.0 is a centrifugal auto clutch featuring Rekluse's EXP (auto clutch) technology
- Full clutch control and use of the lever is retained for a no-compromise riding experience
- Core EXP 3.0 offers dead-on clutch engagement every time and allows riders to take off and stop in gear without using clutch lever
- With Core EXP 3.0, you'll confidently navigate traffic and slow-speed conditions
- Rekluse's billet center hub and pressure plate convert the clutch to six coil springs which improves lever feel, clutch performance and durability
- Increased oil passages in the center hub and pressure plate move more oil through the clutch, decreasing operating temperatures and increasing clutch life
- Installing Core EXP 3.0 does not require modification to stock components
- Shifting the transmission remains unchanged (clutch lever use is recommended for shifting)

## BILLET CLUTCH BASKETS, PRESSURE PLATES AND SPRING KITS

### FOR ALL DUCATI 6-SPEED DRY CLUTCH MODELS

- Baskets are CNC-machined from 2024-T3 billet aluminum and plates from 6061-T6 billet aluminum for increased durability and extended clutch life
- Baskets utilize stainless steel drive inserts where the clutch plate tabs make contact with the basket; Grade 8 fasteners are also used to attach backing plate
- Pressure plates are CNC-machined to match baskets and come with bearing and clutch pin already installed for easy installation; attractive design helps to protect clutch assembly (sold separately) in the event of a tip-over or crash
- Heavy-duty spring kits contain six powdercoated springs, stainless steel screws and choice of anodized spring cups; do not increase lever effort

FLO Oil Filters

## FLO® STAINLESS STEEL, REUSABLE "SPIN-ON" OIL FILTERS

- Made from laser-cut, medical-grade, 304 stainless steel micronic filter cloth, this filter provides 200% more filter area in many cases
- Stainless filter catches items down to 35 microns, which is about three times better than most good paper or brass filters
- Unlike glued paper filters, the FLO® Oil Filter pleat seam is welded and able to withstand up to 315 °C (600 °F)
- Filters maintain consistent flow under all conditions including extreme heat, the presence of water, and cold start-ups where paper filters can flow so poorly that they often cause the bypass valve to open and allow unfiltered oil to enter your engine
- Should be the last filter an owner ever needs; this high tech filter technology is widely used in all types of auto racing including NASCAR, Indy type cars, Formula 1 and in the aerospace industry where filtration is of the utmost importance

Q.E.M.

## POWER COMMANDER V

- Fuel control for each individual cylinder in a smaller enclosure
- "Warm up" fuel adjustment (unit reads engine temp and allows fuel/timing adjustments based on the reading)
- Reduced size from the PCIII USB
- Easy to install
- USB powered from computer; 9 volt adapter is no longer needed
- Two-position map switching function built-in
- Can add any Single Pole Single Throw (SPST) switch and toggle between two different fuel maps
- Gear/speed input allows for map adjustment based on gear
- Analog input allows user to install any 0-5 volt sensor
- Builds an adjustment table based on analog input such as boost or temperature
- Power Commander V is capable of allowing each cylinder to be mapped individually and for each gear with the gear position input connected
- More tuning ranges than PCIII USB
- Map switch can be mounted to change between two different maps that have been pre-loaded to the Power Commander V; available separately
- Enhanced "accel pump" utility
- For Offroad and ATV, see appropriate catalog under Moose Power Commanders

## QUICK SHIFTER EXPANSION MODULE (Q.E.M.)

- The Q.E.M. allows the Dynojet Quick Shifter sensor to be used with Power Commander V on bikes that have eight injectors
- The Q.E.M. connects to the upper injectors and then into the PCV
- Once the sensor is attached you will have full Quick Shifter functionality

**NOTE: Q.E.M. is not necessary if using the S.F.M.**

## SECONDARY FUEL MODULE (S.F.M.)

- Allows for the adjustment of all eight-injectors
- Connects to the upper injector rail using OEM connectors
- Single cable connection to the PCV
- Adjust both upper and lower injectors by as much as +250/-100%
- If gear position input is connected to your PCV, you can adjust all of the injectors on a "per gear" basis
- You can also map each injector separately; giving you up to 48 complete maps
- The "basic" mode allows you to have a single fuel table that simply puts the requested fuel change in both upper and lower injector modules at the same time
- The "basic" mode is the perfect setting for modified engines that require more fuel than four-injectors can provide, but do not need the complexity of mapping each cylinder and each gear separately
- Allows for the use of the Dynojet Quick Shifter sensor on eight-injector bikes, which provides added fuel control and shifter functionality
- See application chart for availability

## DYNOJET QUICK SHIFTER (DQS) SENSORS USB/V

- Races are won or lost in a fraction of a second
- Dynojet's Quick Shifter (DQS) kit allows full-throttle, clutchless upshifts in racing and performance riding applications
- The shift rod pressure/tension sensor kit is a universal sensor that mounts to the shift rod in either a push or pull configuration
- Requires modification of gear-linkage tie-rod
- The linear travel sensor kit works with bikes that have no shift rod, or on those the shift rod sensor will not fit
- Mount one end to the shift lever and the other to a fixed point on the chassis
- Push- or pull-types available with universal mounting kit
- Plugs directly into the Power Commander expansion port with no rewiring required
- Power Commander Control Center software lets you set engine dead time during upshifts and minimum rpm for system operation

| DESCRIPTION | PART # |
|---|---|
| Universal shift rod kit (contains one each of rods A, B, C and D) | **1601-0020** |
| Shift rod linear sensor (pull type) | **1601-0327** |
| Shift rod linear sensor (pull type) for Power Commander V | **1601-0329** |
| Shift rod linear sensor (push type, includes mounting kit) | **1601-0328** |
| Shift rod linear sensor (push type, includes mounting kit) for Power Commander V | **1601-0330** |

- PART #s 1601-0244 and 1601-0245 are "pressure style" sensors for PCV
- PART #s 1601-0327 and 1601-0328 are "linear" sensors for PCIII USB
- PART #s 1601-0329 and 1601-0330 are "linear" sensors for PCV

**NOTE: To order either of the above sensors, you must find the correct direction of movement during an upshift (push or pull). For the shift rod/ pressure/tension sensor, press on the shift lever in the direction of an upshift to see if the rod is pushing or pulling on the clevis on the shift shaft. For the linear travel sensor, also move the shifter for an upshift. If movement is down, a pull sensor is needed. If movement is up, a push sensor is required.**

## UNIVERSAL CLAMP-ON AIR FILTERS

- K&N universal air filters come in four styles — round straight, round tapered, oval straight and oval tapered
- All round straight types, oval straight types and oval tapered types have rubber end caps (unless noted differently)
- All round tapered types have chrome end caps (unless noted differently)
- All clamp directly to the carburetor throat, replacing the stock airbox and filter element
- Pleated design increases surface area air flow
- Match the outer diameter (OD) of your carb throat with the inner diameter (ID) of the filter (given in inches and millimeters)

## POWER-FLO™ FUEL VALVES

- High-performance fuel valves unequaled for over 35 years
- Substantially higher fuel flow than any aftermarket fuel valve
- Some models will require an adapter plate (available separately); see chart below
- For models requiring an adapter plate that is not listed, use the blank style and drill the mounting holes needed in the adapter plate
- The GSX-R valve does not have a provision for reserve

**NOTE: HOW TO MEASURE YOUR BOLT PATTERN: If you don't have a measuring instrument such as a dial caliper to measure the center to center bolt distance on your stock fuel valve, try this method: bend a piece of stiff wire into a horseshoe shape and center the ends from bolt to bolt. Then transfer that measurement to a ruler.**

### WIRE GAUGE SELECTOR

It's important to match up wire diameter and current properly. To choose the right gauge wire, you will need to know how much Wattage (or Amperage) you will draw and what the length of the cable will be.

**NOTE: The chart below is based on a 12V system. To find the appropriate wire for 6V systems, the Amp and Watt numbers should be divided in half.**

| AMP. | WATT | 91 CM (3 FT) | 152 CM (5 FT) | 213 CM (7 FT) | 305 CM (10 FT) | 457 CM (15 FT) |
